                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to preparations (I) comprising a beta-amyloid peptide variant or beta-amyloid N-terminal fragment, or N-terminal amyloid precursor protein (APP) soluble fragment or C-terminal fragment. The beta-amyloid or APP preparations are useful for manufacturing a prophylactic vaccine or a therapeutic, or as a prophylactic vaccine for the prevention, or as a therapeutic for the treatment of a disease associated with beta-amyloid formation and/or aggregation, such as Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                      New beta-amyloid or amyloid precursor protein preparation, useful as a prophylactic vaccine or a therapeutic for preventing or treating a disease associated with beta-amyloid formation and/or aggregation, e.g.

The present invention relates to preparations (I) comprising a beta-amyloid peptide variant or beta-amyloid N-terminal fragment, or N-terminal amyloid precursor protein (APP) soluble fragment or C-terminal fragment. The beta-amyloid or APP preparations are useful for manufacturing a prophylactic vaccine or a therapeutic, or as a treatment of a disease associated with beta-amyloid formation and/or aggregation, such as Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New beta-amyloid or amyloid precursor protein preparation, useful as a prophylactic vaccine or a therapeutic for preventing or treating a disease associated with beta-amyloid formation and/or aggregation, e.g.

                                                                                                                                                                              ð
                                                                                                                                                                                                                                                                               ö
                                                                                                                                             The present invention relates to preparations (I) comprising a beta-amyloid peptide variant or beta-amyloid N-terminal fragment, or N-terminal amyloid precursor protein (APP) solubile fragment or C-terminal fragment. The beta-amyloid or APP preparations are useful for manufacturing a prophylactic vaccine or a therapeutic, or as a prophylactic vaccine for the prevention, or as a therapeutic for the treatment of a disease associated with beta-amyloid formation and/or aggregation, such as Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New beta-amyloid or amyloid precursor protein preparation, useful as a prophylactic vaccine or a therapeutic for preventing or treating a disease associated with beta-amyloid formation and/or aggregation, e.g. Alzheimer's disease.

The invention describes a novel composition comprising a core particle with at least one attachment site, and an antigenic amyloid beta 1-6 peptide. The new composition comprises: a core particle with at least one first attachment site; and at least one antigen or antigenic determinant site, and attachment site, where the antigen or antigenic determinant is a Amyloid beta 1-6 peptide, and where the second attachment site comprises: an attachment site not naturally occurring with the antigen or antigenic determinant; or an attachment site naturally occurring with the antigen or antigenic determinant; or an attachment site attachment site is capable of association to the first attachment site and the beta 1-6 peptide and the core particle interact through the association to form an ordered and repetitive antigen array. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention describes a novel composition comprising a core particle with at least one attachment site, and an antigenic amyloid beta 1-6 peptide. The new composition comprises: a core particle with at least one first attachment site, and at least one antigen or antigenic determinant with at least one second attachment site, where the antigen or antigenic determinant is a Amyloid beta 1-6 peptide, and where the second attachment site comprises: an attachment site not naturally occurring with the antigen or antigenic determinant; or an attachment site naturally occurring with the antigen or antigenic determinant. The second attachment site is capable of association to the first attachment site as association to form an ordered and the core particle interact through the association to form an ordered and repetitive antigen array. The composition is useful for the manufacture of a medicament for treating a labelmer's disease and related diseases. This is the amino acid sequence of an amyloid beta (Abeta) 1-6 peptide that can be used as an alternative to the human sequence in the compositions and vaccines of the invention.
                                                                                                                                                                    ö
composition is useful for the manufacture of a medicament for treating Alzhaimer's disease and related diseases. This is the amino acid sequence of an amyloid beta (Abeta) 1-6 peptide that can be used in the creation of the compostions and vaccines of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Composition comprising a core particle with at least one attachment site, and an antigenic amyloid beta 1-6 peptide, useful for treating diseases

The invention describes a novel composition comprising a core particle with at least one attachment site, and an antigenic amyloid beta 1-6 peptide. The new composition comprises: a core particle with at least one first attachment site; and at least one antigen or antigenic determinant with at least one second attachment site, where the antigen or antigenic determinant is a Amyloid beta 1-6 peptide, and where the second attachment site comprises: an attachment site not naturally occurring with the antigen or antigenic determinant; or an attachment site naturally occurring with the antigen or antigenic determinant. The second attachment site is appable of association to the first attachment site and the beta 1-6 peptide and the association to form an ordered and repetitive antigen array. The association is useful for the manufacture of a medicament for treating composition is useful for the manufacture of a medicament for treating Alzheimer's disease and related diseases. This is the amino acid sequence of an amyloid beta (Abeta) 1-6 peptide that can be used as an alternative to the human sequence in the compositions and vaccines of the invention.

The invention describes a novel composition comprising a core particle with at least one attachment site, and an antigenic amyloid beta 1-6 comptide. The new composition comprises: a core particle with at least one first attachment site; and at least one antigen or antigenic determinant comprises: a core particle with at least one second attachment site, where the antigen or antigenic determinant comprises: an attachment site not naturally occurring with the antigen or antigenic determinant; or an attachment site comprises: an attachment site not naturally occurring with the antigen or antigenic determinant; or an attachment site attachment site is capable of association to the first attachment site or and the beta 1-6 peptide and the core particle interact through the association to form an ordered and repetitive antigen array. The scomposition is useful for the manufacture of a medicament for treating composition is useful for the manufacture of a medicament for treating composition is disease and related diseases. This is the amino acid sequence of an antimunogen manual manual manual manufacture of an immunogen manual manu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Composition comprising a core particle with at least one attachment site, and an antigenic amyloid beta 1-6 peptide, useful for treating diseases such as Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Bachmann MF, Tissot A, Ortmann R, Lueoend R, Staufenbiel M;
                                                                                                                              neuroprotective; nootropic; vaccine; amyloid beta 1-6 peptide; core particle; antigen array; Alzheimer's disease; immunogen.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention describes a novel composition comprising a core particle with at least one attachment site, and an antigenic amyloid beta 1-6 with at least one attachment site, and an antigenic amyloid beta 1-6 first attachment site, and at least one antigen or antigenic determinant of the attachment site comprises: an attachment site or attachment site comprises: an attachment site or attachment site or antigenic determinant; or an attachment site or attachment site or antigenic determinant; or an attachment site or attachment site or attachment site or attachment site or antigenic determinant; or an attachment site or attachment site is capable of association to the first attachment site and the beta 1-6 peptide and the core particle interact through the association to form an ordered and repetitive antigen array. The association to form an ordered and repetitive antigen array. The composition is useful for the manufacture of a medicament for treating also an and related diseases. This is the amino acid sequence of an amyloid beta (Abeta) 1-6 peptide that can be used as an alternative to the human sequence in the compostions and vaccines of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Composition comprising a core particle with at least one attachment site, and an antigenic amyloid beta 1-6 peptide, useful for treating diseases such as Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

The invention comprises peptides which mimic the N-terminal region of amyloid-beta (AB42) peptide (Asp-Ala-Glu-Phe-Arg-His). The peptides of the invention have the capacity to bind to an antibody which is specific for the N-terminal region of the AB42 peptide. The peptides (mimotopes) of the invention are useful in the preparation of a vaccine for Alzheimer's disease. The present amino acid sequence represents an N-terminal AB42 peptide mimotope of the invention.
                                                                                                               The invention comprises peptides which mimic the N-terminal region of amyloid-beta (AB42) peptide (Asp-Ala-Glu-Phe-Arg-His). The peptides of the invention have the capacity to bind to an antibody which is specific for the V-terminal region of the AB42 peptide. The peptides (mimotopes) of the invention are useful in the preparation of a vaccine for Alzheimer's disease. The present amino acid sequence represents an N-terminal AB42 peptide mimotope of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Use of a compound having a binding capacity to an antibody specific for the natural N-terminal AB42 sequence, for preparing a vaccine for preventing and treating Alzheimer's disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    amyloid-beta (AB42) peptide (Asp-Ala-Glu-Phe-Arg-His). The peptides of the invention have the capacity to bind to an antibody which is specific for the N-terminal region of the AB42 peptide. The peptides (mimotopes) of the invention are useful in the preparation of a vaccine for Alzheimer's disease. The present amino acid sequence represents an N-terminal AB42 peptide mimotope of the invention.
                                                                                                                                                                                                                                                                                                                                                  Use of a compound having a binding capacity to an antibody specific for the natural N-terminal AB42 sequence, for preparing a vaccine for preventing and treating Alzheimer's disease.

The invention comprises peptides which mimic the N-terminal region of amyloid-beta (AB42) peptide (Asp-Ala-Glu-Phe-Arg-His). The peptides of the invention have the capacity to bind to an antibody which is specific for the N-terminal region of the AB42 peptide. The peptides (mimotopes) of the invention are useful in the preparation of a vaccine for Alzheimer's disease. The present amino acid sequence represents an N-terminal AB42 peptide mimotope of the invention.
                                                                                                                                                                                                                                              Use of a compound having a binding capacity to an antibody specific for the natural N-terminal AB42 sequence, for preparing a vaccine for preventing and treating Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                        100.0%; Score 24; DB 8; Length 6; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention comprises peptides which mimic the N-terminal region of amyloid-beta (AB42) peptide (Asp-Ala-Glu-Phe-Arg-His). The peptides of the invention have the capacity to bind to an antibody which is specific for the V-terminal region of the AB42 peptide. The peptides (mimotopes) of the invention are useful in the preparation of a vaccine for Alzheimer's disease. The present amino acid sequence represents an N-terminal AB42 peptide mimotope of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Use of a compound having a binding capacity to an antibody specific for the natural N-terminal AB42 sequence, for preparing a vaccine for preventing and treating Alzheimer's disease.

                                                                            The invention comprises peptides which mimic the N-terminal region of amyloid-beta (ABP-ALa-Glu-Phe-Arg-Hiss). The peptides of the invention have the capacity to bind to an antibody which is specific for the N-terminal region of the AB42 peptide. The peptides (mimotopes) of the invention are useful in the preparation of a vaccine for terminal AB42 peptide amino acid sequence represents an N-terminal AB42 peptide mimotope of the invention.

The peptides of the invention have the capacity to bind to an antibody which is specific for the N-terminal region of the AB42 peptide. The peptides (mimotopes) of the invention are useful in the preparation of a vaccine for Alzheimer's disease. The present amino acid sequence represents an N-terminal AB42 peptide mimotope of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Use of a compound having a binding capacity to an antibody specific for the natural N-terminal AB42 sequence, for preparing a vaccine for preventing and treating Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

The invention comprises peptides which mimic the N-terminal region of amyloid-beta (AA42) peptide (Asp-Ala-Glu-Phe-Arg-His). The peptides of the invention have the capacity to bind to an antibody which is specific for the N-terminal region of the AB42 peptide. The peptides (mimotopes) of the invention are useful in the preparation of a vaccine for Alzheimer's disease. The present amino acid sequence represents an N-terminal AB42 peptide mimotope of the invention.
                                                                                                                                        The invention comprises peptides which mimic the N-terminal region of amyloid-beta (AB42) peptide (Asp-Ala-Glu-Phe-Arg-His). The peptides of the invention have the capacity to bind to an antibody which is specific for the N-terminal region of the AB42 peptide. The peptides (mimotopes) of the invention are useful in the preparation of a vaccine for Alzheiner's disease. The present amino acid sequence represents an N-terminal AB42 peptide mimotope of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Use of a compound having a binding capacity to an antibody specific for the natural N-terminal AB42 sequence, for preparing a vaccine for preventing and treating Alzheimer's disease.
                          Use of a compound having a binding capacity to an antibody specific for the natural N-terminal AB42 sequence, for preparing a vaccine for preventing and treating Alzhelmer's disease.
                                                                                                                                                                                                                                                                                                                                                                                  ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                    g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention comprises peptides which mimic the N-terminal region of amyloid-beta (AB42) peptide (Asp-Ala-Glu-Phe-Arg-His). The peptides of the invention have the capacity to bind to an antibody which is specific for the N-terminal region of the AB42 peptide. The peptides (mimotopes) of the invention are useful in the preparation of a vaccine for Alzheimer's disease. The present amino acid sequence represents an N-terminal AB42 peptide mimotope of the invention.
                                                                                                                                                                                                                                                                                                                                                                                          Use of a compound having a binding capacity to an antibody specific for the natural N-terminal AB42 sequence, for preparing a vaccine for preventing and treating Alzheimer's disease.

                                                                                                                                                                                                                                                                                                                                                                                                           The invention comprises peptides which mimic the N-terminal region of amyloid-beta (ABP-DHa-Glu-Phe-Arg-His). The peptides of the invention have the capacity to bind to an antibody which is specific for the N-terminal region of the AB42 peptide. The peptides (mimotopes) of the invention are useful in the preparation of a vaccine for Alzheimer's disease. The present amino acid sequence represents an N-terminal AB42 peptide mimotope of the invention.
                                                                                                                                                                                                                                                                                                                                                     Use of a compound having a binding capacity to an antibody specific for the natural N-terminal AB42 sequence, for preparing a vaccine for preventing and treating Alzheimer's disease.

The invention comprises peptides which mimic the N-terminal region of amyloid-beta (AB42) peptide (Asp-Ala-Glu-Phe-Arg-His). The peptides of the invention have the capacity to bind to an antibody which is specific for the N-terminal region of the AB42 peptide. The peptides (mimotopes) of the invention are useful in the preparation of a vaccine for Alzheimer's disease. The present amino acid sequence represents an N-terminal AB42 peptide mimotope of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            specific for

The invention comprises peptides which mimic the N-terminal region of amyloid-beta (AA42) peptide (Asp-Ala-Glu-Phe-Arg-His). The peptides of the invention have the capacity to bind to an antibody which is specific for the N-terminal region of the AB42 peptide. The peptides (mimotopes) of the invention are useful in the preparation of a vaccine for Alzheiner's disease. The present amino acid sequence represents an N-terminal AB42 peptide mimotope of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Use of a compound having a binding capacity to an antibody specific for the natural N-terminal AB42 sequence, for preparing a vaccine for preventing and treating Alzheimer's disease.

The peptides of the invention have the capacity to bind to an antibody which is specific for the N-terminal region of the AB42 peptide. The peptides (mimotopes) of the invention are useful in the preparation of a vaccine for Alzheiner's disease. The present amino acid sequence represents an N-terminal AB42 peptide mimotope of the invention.

                                                                                                                                                                                                                                                             The invention comprises peptides which mimic the N-terminal region of amyloid-beta (AB42) peptide (Asp-Ala-Glu-Phe-Arg-His). The peptides of the invention have the capacity to bind to an antibody which is specific for the V-terminal region of the AB42 peptide. The peptides (mimotopes) of the invention are useful in the preparation of a vaccine for Alzheimer's disease. The present amino acid sequence represents the
                                                                                                                                                                                                       Use of a compound having a binding capacity to an antibody specific for the natural N-terminal AB42 sequence, for preparing a vaccine for preventing and treating Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                              ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention describes a novel method of preventing or treating a disease associated with amyloid deposits of amyloid precursor protein App. Meta fragments in the brain of a patient, which comprises administering to the patient: (a) an antibody that binds to Abeta, the antibody binds to an amyloid deposit and induces a clearing response (Fc receptor mediated phagocytosis) against it (b) a polypeptide containing an N-terminal segment of at least residues 1-5 of Abeta, or (c) an agent that induces an immunogenic response against residues 1-3 to 7-11 of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     or treating a disease associated with amyloid deposits, Alzheimer's disease, comprises administering amyloid specific
Use of a compound having a binding capacity to an antibody specific for the natural N-terminal AB42 sequence, for preparing a vaccine for preventing and treating Alzheimer's disease.
                                                                                                                                                                                                                                                                  The invention comprises peptides which mimic the N-terminal region of amyloid-beta (AB42) peptide (Asp-Ala-Glu-Phe-Arg-His). The peptides of the invention have the capacity to bind to an antibody which is specific for the N-terminal region of the AB42 peptide. The peptides (mimotopes) of the invention are useful in the preparation of a vaccine for Alzheimer's disease. The present amino acid sequence represents an N-terminal AB42 peptide mimotope of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

The invention relates to the field of the neurodegenerative disorder of Alzheimer's disease (AD). In particular, the invention provides a novel mutation (7714) identified in the amyloid precursor protein (APP), APP714, which leads to a very aggressive form of AD. The mutation involves the 43rd codon of the amyloid Beta peptide (A-Beta) corresponding to the putative gamma 42-secretion elevating the A-mutation alters both A-Beta40 and A-Beta42 secretion elevating the A-Beta40 ratio by 10-fold in vitro. Furthermore, the main amyloid plaque pathology in brains of these patients is of the diffuse 'premayloid' type composed primarily of N-truncated A-Beta42. Dense-cored plaques although not absent, were significantly reduced. Also, the usual plaques in brain where A-Beta40 is predominantly deposited, for instance, in vessels as cerebral amyloid anglopathy (CAA) or senile plaque cores, were composed entirely of A-Beta42 form. Together, these indicate that deposited in the brain, the diffuse plaques, is fully competent of inciting AD either through the well-established 'amyloid cascade' or by a
                                                                                                                                                                                     ö
Abeta. The products of the invention have nootropic and neuroprotective activity. The method is also useful for monitoring a course of treatment being administered to a patient e.g. active and passive immunization. The methods are useful for prophylactic and therapeutic treatment of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Neurodegenerative disorder; Alzheimer's disease; AD; T714I; APP; APP714; amyloid precursor protein; amyloid Beta peptide; A-Beta; A-Beta40; brain; A-Betea4; plaque pathology; pre-amyloid; cerebral amyloid angiopathy; Dense-cored plaque; CAA; senile plaque core; amyloid cascade; murine; mouse; DAEFRHD; monoclonal antibody.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          modulate the generation of one or more metabolites associated with a disease or disorder comprising determining levels of a cellular component protein or a conformation state of a cellular precursor protein. In particular, the method can be used to determine levels of amyloid precursor protein (APP), which is associated with Alzheimer's disease. It is also useful for identifying compounds as drugs for treating diseases or disorders associated with metabolic and/or proteolytic pathways, e.g. Alzheimer's disease, Parkinson's disease, Huntington's disease, lysosomal storage disorders, prion diseases, the tau-based neurodegenerative disorders, and other non-AD amyloidoses. The present sequence is an
yet unknown mechanism(s). This sequence represents a synthetic peptide of A-Beta, residues 1-7 (DAEFRHD). This sequence was used for raising a monoclonal antibody specific for the N-terminus of A-Beta40 and A-Beta42 by immunising mice with the synthetic peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                     high-throughput screening; neuroprotective; nootropic; antiparkinsonian.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              present invention relates to a method of identifying compounds that

The invention relates to a method for prevention and/or treatment of an amyloid-related disease which comprises administration of an all-D-amyloid-beta peptide. The method is used for preventing and/or treating and/oid-beta peptide. The method is used for preventing and/or treating and/out-beta in a mammal and angiopathy; for altering serum levels of amyloid-beta in a mammal and canourse the clearance of soluble amyloid-beta in a mammal and the mammal; and reducing or inhibiting the formation of plaques. It is also used for treating AA (reactive) amyloid diseases including inflammatory diseases e.g. theumatory diseases e.g. theumatory diseases e.g. theumatory diseases e.g. theumatory diseases. Bechet's syndrome, Adult Still's disease, Bechet's syndrome and Crohn's disease. AA deposits are also produced as a result of chronic microbial infections (preferably leprosy, tuberculosis, bronchiectasis, decubitus ulcers, chronic pyelonephritis, osteomyelitis and Mhipple's disease). Certain malignant neoplasms can also result in AA fibril amyloid deposits
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   including Hodgkin's lymphoma, renal carcinoma, carcinomas of gut, lung and urogenital tract, basal cell carcinoma and hairy cell leukaemia. The present sequence is an Abeta peptide used to illustrate the method of the

The present invention describes an antibody molecule (I) capable of specifically recognising two regions of the beta-A4 peptide/Abeta4. The first region comprises the amino acid sequence Ala-Glu-Phe-Arg-His-App-CS Ser-Gly-Tyr ADA89886 or its fragment, and the second region comprises the amino acid sequence Val-His-His-Glu-Val-Phe-Phe-Ala-Glu-Abp-Val-CG amino acid sequence Val-His-His-Glu-Val-Phe-Phe-Ala-Glu-Abp-Val-CC Gly ADA89887 or its fragment. Also described: (1) a nucleic acid molecule CC encoding (1); (2) a vector comprising the nucleic acid of (1); (3) a host CC culturing the host cell of (3) under conditions that allow synthesis of CC (1) and recovering (I) from the culture; (5) a composition comprising (I), comprising (I), comprising the resulting Fab optimisation (1); (8) testing the resulting Fab optimisation library by panning CC (1); (8) testing the resulting Fab optimisation library by panning CC against Abeta4. (9) identifying optimisation library by panning CC against Abeta4. (9) identifying optimisation a pharmaceutical composition, comprising optimisation of (1), had formulating the composition comprising optimisation of (1), had formulating the composition 
                                                                                                                                                                                                                                                  antibody molecule; antibody; beta-A4 peptide; Abeta4; neuroprotective; nootropic; antiparkinsonian; gene therapy; amyloidogenesis; amyloid-plaque formation; beta-amyloid plaque; immunisation; dementia; Alzheimer; a disease; motor neuropathy; Down's syndrome; Creutzfeldt Jacob disease; hereditary cerebral haemorrhage; amyloidosis; Parkinson's disease; HIV-related dementia; amyotrophic lateral sclerosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     pharmaceutical composition prepared by method (8). (1) has neuroprotective, nootropic and antiparkinsonian activities, and can be neuroprotective, nootropic and antiparkinsonian activities, and can be used in gene therapy. The antibody molecule (1), nucleic acid molecule, vector or host is useful in preparing a pharmaceutical composition for the prevention and/or treatment of a disease associated with amyloidogenesis and/or amyloid-plaque formation. The antibody molecule may also be used in preparing a diagnostic composition for the disease mentioned above. The antibody is used for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       regions of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes an antibody molecule (1) capable of specifically recognising two regions of the beta-A4 peptide/Abeta4. The first region comprises the amino acid sequence Ala-clu-Phe-Arg-His-Asp-Ser-Gly-Tyr ADA89886 or its fragment, and the second region comprises the amino acid sequence Val-His-His-Gln-Lys-Leu-Val-Phe-Phe-Ala-Glu-Asp-Val-Gly ADA89887 or its fragment. Also described: (1) a nucleic acid molecule encoding (1); (2) a vector comprising the nucleic acid of (1); (3) a host cell comprising the vector of (2); (4) preparing (1), comprising culturing the host cell of (3) under conditions that allow synthesis of (1) and recovering (1) from the culture; (5) a composition comprising (1)
disintegration of beta-amyloid plaques or for passive immunisation against beta-amyloid plaque formation. In particular, the disease is dementia, Alzheimer's disease, motor neuropathy, Down's syndrome, creutzfeldt Jacob disease, hereditary cerebral haemorrhage with amyloidosis Dutch type, Parkinson's disease, HIV-related dementia, amyloidosis Dutch type, Parkinson's disease, HIV-related dementia, amylotrophic lateral sclerosis or neuronal disorders related to aging. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         antibody molecule; antibody; beta-A4 peptide; Abeta4; neuroprotective; nootropic; antiparkinsonian; gene therapy; amyloidogenesis; amyloid-plaque formation; beta-amyloid plaque; immunisation; dementia; Alzheimer; giasease; motor neuropathy; Down's syndrome; Creutzfeldt Jacob disease; hereditary cerebral haemorrhage; amyloidosis; Parkinson's disease; HIV-related dementia; amyotrophic lateral sclerosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        regions of

cc or an antibody molecule produced by method (4); (6) a kit comprising (1), octor of (2) or host cell of (3); (7) optimising CC nucleic acid of (1), vector of (2) or host cell of (3); (7) optimising CC (1); (8) testing the resulting Fab optimised clones; (10) expressing against Abeta44; (9) identifying optimised clones; (10) expressing cof selected, optimised clones; (11) preparing a pharmaceutical composition, comprising optimisation of (1), and formulating the optimised antibody/antibody molecule with a carrier; and (12) a pharmaceutical composition prepared by method (8). (1) has controprotective, nootropic and antiparkinsonian activities, and can be consed in gene therapy. The antibody molecule (1), nucleic acid molecule, vector or host is useful in preparing a pharmaceutical composition for the prevention and/or treatment of a disease associated with any also be used in preparing a disease associated with any of the disease mentioned above. The antibody is used for the detection of beta-amyloid plaques formation. The antibody molecule coff the disease mentioned above. The antibody is used for the disease is dementia, Alzheimer's disease, motor neuropathy, Down's syndrome, content particular, the disease is content particular, the disease is amyloid plaque formation. In particular, the disease is content any disease, HIV-related dementia, amyloid clateral sclerosis or neuronal disorders related to aging. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            antibody molecule, antibody; beta-A4 peptide; Abeta4; neuroprotective; nootropic; antiparkinsonian; gene therapy; amyloidogenesis; amyloid-plaque formation; beta-amyloid plaque; immunisation; dementia; Alzheimer; disease; motor neuropathy; Down's syndrome; Creutzfeldt Jacob disease; hereditary cerebral haemorrhage; amyloidosis; Parkinson's disease; HIV-related dementia; amyotrophic lateral sclerosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New antibody molecule capable of specifically recognizing two regions of
the beta-A4 peptide, useful for diagnosing, preventing or treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

New antibody molecule capable of specifically recognizing two regions the beta-A4 peptide, useful for diagnosing, preventing or treating diseases associated with amyloidogenesis or amyloid-plaque formation

us-10-618-856-1.max10.rag

```
The present invention describes an antibody molecule (I) capable of specifically recognising two regions of the beta-A4 peptide/Abeta4. The first region comprises the amino acid sequence Ala-Glu-Phe-Arg-His-App-Sar-Gly-Tyr ADAB9886 or its fragment, and the second region comprises the amino acid sequence Val-His-His-Gln-Lys-Leu-Val-Phe-Ala-Glu-Asp-Val-Gly ADAB9887 or its fragment. Also described: (I) a mucleic acid molecule encoding (I); (2) a vector comprising the nucleic acid of (I); (3) a host call comprising the vector of (2); (4) preparing (I), comprising the vector of (2); (4) preparing (I), comprising (I) colluring the host cell of (3) under conditions that allow synthesis of (I) and recovering (I) from the culture; (5) a composition comprising (I), or an antibody molecule produced by method (4); (6) a kit comprising (I), or an antibody molecule produced by method (4); (6) a kit comprising (I), or an antibody molecule produced by method (4); (6) a kit comprising (I), or an antibody antibody molecule with a carrier; and (10) expressing capainst Abeta4; (9) identifying optimised clones; (I) preparing a pharmaceutical composition, comprising optimisation of (I), and formulating the optimised antibody/antibody molecule with a carrier; and (12) a composition, comprising optimisation of (I), and formulating the composition prepared by method (8). (I) has neuroprotective, nootropic and antiparkinsonian activities, and can be useful in preparing a pharmaceutical composition prepared by method (8). (I) has not not anyloid plaque formation. The antibody molecule of a disease associated with may also be used in preparing a pharmaceutical composition and/or treatment of a disease associated with may also be used in preparing a pharmaceutical composition and or the prevention and or treatment of a disease associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    may also be used in preparing a diagnostic composition for the detection of the disease mentioned above. The antibody is used for the disease mentioned above. The antibody is used for the disease distinces anyloid plaques or for passive immunisation against beta-amyloid plaque formation. In particular, the disease is dementia, Alzheimer's disease, motor neuropathy, Down's syndrome, Creutzfeldt Jacob disease, hereditary cerebral haemorrhage with amyloidosis Dutch type, Parkinson's disease, HIV-related dementia, amyloidosis lateral sclerosis or neuronal disorders related to aging. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                antibody molecule; antibody; beta-A4 peptide; Abeta4; neuroprotective; nootropic; antiparkinsonian; gene therapy; amyloidogenesis; amyloid-plaque formation; beta-amyloid plaque; immunisation; dementia; Alzheimer's disease; motor neuropathy; Down's syndrome; creuzzfeldt Jacob disease; hereditary cerebral haemorrhage; amyloidosis; Parkinson's disease; HIV-related dementia; amyotrophic lateral sclerosis;

The present invention describes an antibody molecule (1) capable of specifically recognising two regions of the beta-A4 peptide/Abeta4. The first region comprises the amino acid sequence Ala-Glu-Phe-Asg-His-Asg-Gser-Gly-Tyr ADA89806 or its fragment, and the second region comprises the amino acid sequence val-His-His-Glu-Lys-Leu-Val-Phe-Phe-Ala-Glu-Asg-Val-Gly ADA89808 or its fragment. Also described: (1) a nucleic acid molecule concoding (1); (2) a vector comprising the nucleic acid of (1); (3) a host cell comprising the host cell of (3) under conditions that allow synthesis of culturing the host cell of (3) under conditions that allow synthesis of culturing the host cell of (3) under conditions that allow synthesis of culturing the host cell of (3) under conditions that allow synthesis of culturing the host cell of (1) wetcor of (2); (4) preparing (1); (3) a host culturing the host cell of (1) wetcor of (2); (4) perminal or comprising the resulting the resulting the resulting sea optimisation library by panning of selected, optimised clones; (10) expressing of selected, optimised clones; (11) reparing a pharmaceutical composition for optimised antibody/antibody molecule with a carrier; and (12) a pharmaceutical composition prepared by method (8). (1) has neuroprotective, nootropic and antiparkinsonian activities, and can be used in gene therapy. The antibody molecule (1), nucleic acid molecule consecution and/or treatment of a disease associated with amy also be used in preparing a diagnostic composition for the disease mentioned above. The antibody is used for the disease is consisted with a dementia, Alzheimer's disease, merconsecution of beta-amyloid plaques or for passive immunisation of the dementia, Alzheimer's disease, hereditary cerebral hemorrhage with anyologies butch type, Parkinson's disease, HIV-related dementian.

Creutzfeldt Jacob disease, nereditary cerebral hemorrhage dementian.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

The present invention describes an antibody molecule (I) capable of specifically recognising two regions of the beta-AA peptide/Abeta4. The first region comprises the amino acid sequence Ala-Glu-Phe-Axsp. 68-Gliy-Tyr ADA89886 or its fragment, and the second region comprises the amino acid sequence Ala-Glu-Phe-Axsp. 68-Gliy-Tyr ADA89886 or its fragment, and the second region comprises the amino acid sequence Val-His-His-Gln-Lys-Leu-Val-Phe-Phe-Ala-Glu-Asp-Val-Gly ADA89887 or its fragment. Also described: (1) a nucleic acid molecule cocding (I); (2) a vector comprising the nucleic acid of (1); (3) a host cell of (3) under conditions that allow synthesis of culturing the host cell of (3) under conditions that allow synthesis of (1); (1) and recovering (1) from the culture; (5) a composition comprising (I), vector of (2) or host cell of (3); (4) preparing (I); (7) optimising (1); (8) testing the resulting Fab optimisation library by panning of selected, optimised clones; (11) preparing a pharmaceutical composition, comprising optimisation of (1), and formulating the optimisation of (1), and formulating the pharmaceutical composition prepared by method (8). (1) has panning of selected, optimised antibody molecule with a carrier; and (12) a pharmaceutical composition prepared by method (8). (1) has prepared by method (8). (1) has meaning the cherapy. The antibody molecule formation. The disease method of a disease associated with a carrier; and can be used in preparing a disease associated with antibody molecule of antibody molecule of composition for the disease mentioned above. The antibody is used for the disease mentioned above. The antibody is used for the disease is dementia, Alzheimer's disease, metor neuropathy, Down's syndrome, completed of anyloidosis Dutch type, Parkinson's disease, hereditary cerebral haemorrhage with anyloid plaque formation. In particular, the disease is central the parament of a signification of passing prepared in the adisease, hereditary cerebral haemorrhage with a moloidosis Dutch t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        amyorropnic lateral sclerosis or neuronal disorders related to aging. The present sequence is used in the exemplification of the present invention.
                 antibody molecule; antibody; beta-A4 peptide; Abeta4; neuroprotective; noctropic; antiparkinsonian; gene therapy; amyloidogenesis; amyloid-plaque formation; beta-amyloid plaque; immunisation; dementia; Alzheimer's disease; motor neuropathy; Down's syndrome; Creutzfeldt Jacob disease; hereditary cerebral haemorrhage; amyloidosis; Parkinson's disease; HIV-related dementia; amyotrophic lateral sclerosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New antibody molecule capable of specifically recognizing two regions of the beta-A4 peptide, useful for diagnosing, preventing or treating diseases associated with amyloidogenesis or amyloid-plaque formation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Disclosure; Page 264; 312pp; English.

amyloid peptide variant or beta-amyloid N-terminal fragment, or N-terminal amyloid precursor protein (APP) soluble fragment or C-terminal fragment. The beta-amyloid or APP preparations are useful for manufacturing a prophylactic vaccine or a therapeutic, or as a prophylactic vaccine for the prevention, or as a therapeutic for the treatment of a disease associated with beta-amyloid formation and/or aggregation, such as Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New beta-amyloid or amyloid precursor protein preparation, useful as a prophylactic vaccine or a therapeutic for preventing or treating a disease associated with beta-amyloid formation and/or aggregation, e.g.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to preparations (I) comprising a beta-amyloid peptide variant or beta-amyloid N-terminal fragment, or N-terminal amyloid precursor protein (APP) soluble fragment or C-terminal fragment. The beta-amyloid or APP preparations are useful for manufacturing a prophylactic vaccine or a therapeutic, or as a trepreparatic vaccine for the prevention, or as a therapeutic for treatment of a disease associated with beta-amyloid formation and/or aggregation, such as Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New beta-amyloid or amyloid precursor protein preparation, useful as a prophylactic vaccine or a therapeutic for preventing or treating a disease associated with beta-amyloid formation and/or aggregation, e.g. Alzheimer's disease.

The invention describes an immunogenic composition (I) comprising a cholera holotoxin (CT) and an antigen covalently associated with CT. CT comprises A subunit (CT-A) having a mutation at amino acid residue 29 of a sequence (SI) of 240 amino acids fully defined in the specification, where the mutation is not aspartic acid, where CT increases immunogenicity of the antigen, (b) CT and an antigen covalently associated with CT. where CT comprises one or more mutations in CT-A, where CT increases immunogenicity of the antigen, (c) Escherichia coli heat labile toxin (LT) and an antigen covalently associated with LT, where LT increases immunogenicity of the antigen, or (d) a pertussis toxin (PT) and an antigen covalently associated with PT, where PT increases immunogenicity of the antigen. Isolated and purified CT, LT and PT polymucleotides and polypeptides, are also disclosed. (1) is useful
                                                               The invention comprises peptides which mimic the N-terminal region of amyloid-beta (AB42) peptide (Asp-Ala-Glu-Phe-Arg-His). The peptides of the invention have the capacity to bind to an antibody which is specific for the N-terminal region of the AB42 peptide. The peptides (mimotopes) of the invention are useful in the preparation of a vaccine for Alzheimer's disease. The present amino acid sequence represents the

The present sequence represents a peptide derived from beta-amyloid precursor protein (beta-APP, see AAW70863). The peptide is a beta-amyloid peptide and is used to produce a monoclonal antichody designated antisenilin N1/7. The specification describes a method for prevention or inhibition of progression of Alzheimer's disease. The method comprises administering a composition comprising a recombinant DNA molecule containing a gene encoding a recombinant antibody end-specific for the N-terminus or the C-terminus of an amyloid-beta peptide, operably linked to a promoter which is expressed in the central nervous system. The cecombinant antibody molecules prevent the accumulation of beta-amyloid peptides in the extracellular space, interstitial fluid and cerebrospinal fluid and the aggregation of such peptides into amyloid deposits in the train. They also inhibit the progression of Alzheimer's disease by inhibiting the interaction of beta-amyloid peptides mediating Alzheimer's disease induced neurotoxicity and inhibiting the Alzheimer's disease.
                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Beta-amyloid precursor protein; beta-APP; beta-amyloid peptide; antibody; amyloid deposit; Alzheimer's disease.

This invention relates to a novel method for modulating activity of betacisite amyloid precursor protein (APP)-cleaving enzyme (BACE)

site amyloid precursor protein (APP)-cleaving enzyme (BACE)

conclusion of a soluble BACE which enhances the production of the actiology of Albreimer's disease. Inhibition of BACE secretase can be actiology of Albreimer's disease. Inhibition of BACE secretase can be actiology of Albreimer's disease. Inhibition of BACE secretase can be convicted by administration of an antisense nucleotide molecule capable of Abridiating with BACE mRNA, by using a ribozyme that targets and degrades by the secretase mRNA, with a peptide that can interfere with binding of the enzyme with BACE or using an antibody or antagonist that can function as an inhibitor of BACE secretase activation. The methods of the curvedgenerative disorder characterised by the generation of Abeta creatment of a secretase of BACE, which is useful for the treatment of a neurodegenerative disorder characterised by the generation of Abeta creatment of a neurodegenerative disorder characterised by the generation of Abeta creatment condensially Albreimer's disease. The invention also comprises a method for determining whether an individual creatment of a secretase to associate with and process a known substrate, this method can be used for high throughput screening of candidate molecules. The invention also comprises a method for determining whether an individual is at risk of developing a neurodegenerative disorder characterised by the generation of Abeta products in a sample or tissue where an increase in cleavage products in a sample or tissue where an increase in cleavage products indicates a person at risk. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Modulating activity of beta-site amyloid precursor protein-cleaving enzyme secretase/sheddase for treatment of neurodegenerative disorder characterized by generation of Abeta protein, by preventing cleavage of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Disclosure; Page 28; 64pp; English.

The antigenic products are useful for eliciting an immune response against a deposit-forming polypeptide involved in a plaqueforming disease or disorder, e.g. Alzheimer's disease, SAA amyloidosis, hereditary Icelandic syndrome, senility, multiple myeloma, Creutzfeldt-Jakob disease, Kuru, Gerstmann-Straussler-Scheinker disease, fatal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Antigenic product has dendritic polymer built on core molecule having terminal functional groups to which antigenic peptide that has epitope of deposit-forming polypeptide involved in plaque-forming disease is joined.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Nootropic; neuroprotective; antiinflammatory; vaccine; antigenic product; plaque-forming disease; Alzheimer's disease; SAA amyloidosis; heraditary Icelandic syndrome; senlitry; multiple myeloma; Creutzfeldt-Jakob disease; Kuru; Geratmann-Straussler-Scheinker disease; fatal familial insomnia; scrapie; bovine spongiform encephalitis;

New antibody that is targeted to amyloid beta peptide, or its fragment, useful for treating a subject having Alzheimer's disease, or a disease or disorder characterized by amyloid beta deposition, e.g. cognitive

impairment or dementia.

The present invention describes an antibody that is targeted to amyloid beta peptide, or its fragment. Also described: (1) an antibody that is tree-end specific and is targeted to: (a) the free N-terminus of amyloid beta-peptide, where the firet amino acid of amyloid beta-peptide is aspartate; (c) the free N-terminus of the amyloid beta-peptide fragment; (d) the free C-terminus of N- and/or C-terminus of the amyloid beta-peptide Abetal-13, Abetal-40, Abetal-41 or Abetal-43 or (e) to the free C-terminus of N- and/or C-terminus of the amyloid beta-peptide Abetal-13, and (3) a single chain or artificial antibody that is free-end specific and is targeted to the free C-terminus of the amyloid beta-peptide Abetal-14; and (3) a mithody targeted to amyloid beta peptide Abetal-42; and (3) a mithody targeted to amyloid beta peptide has nootropic and carrier. The antibody targeted to amyloid beta peptide has nootropic and a mutibody therapy. The antibody or its fragment is useful for manufacturing a medicament for treating a subject having Alzheimer's disease or a disease or disorder characterised by amyloid beta deposition (e.g. mild cognitive impairment, cerebral amyloid angiopathy or conglophylic angiopathy, Alzheimer's disease associated with Down's syndrome, or inclusion of amyloid beta peptide or the neurotoxicity of amyloid beta peptide or its fragment. On the present sequence represents an amyloid beta peptide which is (App). The present sequence represents an amyloid beta peptide which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

Also described: (1) an antibody that is tree-end specific and is targeted to: (a) the free N-terminus of amyloid beta-peptide, where the first amino acid of amyloid beta-peptide, where the first amino acid of amyloid beta-peptide is aspartate; (c) the free N-terminus of N-and/or C-terminus of the amyloid beta-peptide Abeta-1-39, Abetal-40, Abetal-41 or Abetal-43, or (e) to the free C-terminus of N-and/or C-terminus of the amyloid beta-peptide Abetal-42, and (3) a single chain or artificial antibody that is free-end specific and is targeted to the free C-terminus of the amyloid beta-peptide Abetal-42, and (3) a single chain or artificial composition comprising the antibody, and a carrier. The antibody targeted to amyloid beta peptide has nootropic and neuroprotective activities, and can be used in antibody therapy. The antibody or its fragment is useful for manufacturing a medicament for treating a subject having Alzheimer's disease or disorder characterised by amyloid beta deposition (e.g. mild cognitive impairment, cerebral amyloid angiopathy or congiophylic angiopathy, Alzheimer's disease associated with Down's syndrome, or inclusion body myositis), or for delaying, inhibiting or suppressing accumulation of amyloid beta peptide, or the neurotoxicity of amyloid beta peptide or its fragment.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to preparations (I) comprising a beta-amyloid peptide variant or beta-amyloid N-terminal fragment, or N-terminal amyloid precursor protein (APP) soluble fragment or C-terminal fragment. The beta-amyloid or APP preparations are useful for manufacturing a prophylactic vaccine or a therapeutic, or as a prophylactic vaccine for the prevention, or as a therapeutic for the treatment of a disease associated with beta-amyloid formation and/or aggregation, such as Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New beta-amyloid or amyloid precursor protein preparation, useful as a prophylactic vaccine or a therapeutic for preventing or treating a disease associated with beta-amyloid formation and/or aggregation, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

The present invention relates to preparations (I) comprising a beta-amyloid peptide variant or beta-amyloid N-terminal fragment, or N-terminal amyloid precursor protein (APP) soluble fragment or C-terminal fragment. The beta-amyloid or APP preparations are useful for manufacturing a prophylactic vaccine or a therapeutic, or as a prophylactic vaccine for the prevention, or as a therapeutic for the treatment of a disease associated with beta-amyloid formation and/or
                                                                                                                                                                                                                         New beta-amyloid or amyloid precursor protein preparation, useful as a prophylactic vaccine or a therapeutic for preventing or treating a disease associated with beta-amyloid formation and/or aggregation, e.g. Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        100.0%; Score 24; DB 8; Length 8; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to preparations (I) comprising a beta-amyloid peptide variant or beta-amyloid N-terminal fragment, or N-terminal amyloid precursor protein (App) soluble fragment or C-terminal fragment. The beta-amyloid or App preparations are useful for manufacturing a prophylactic vaccine or a therapeutic, or as a prophylactic vaccine for the prevention, or as a therapeutic for the treatment of a disease associated with beta-amyloid formation and/or aggregation, such as Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                   New beta-amyloid or amyloid precursor protein preparation, useful as a prophylactic vaccine or a therapeutic for preventing or treating a disease associated with beta-amyloid formation and/or aggregation, e.g.

The present invention relates to preparations (I) comprising a beta-amyloid peptide variant or beta-amyloid N-terminal fragment, or N-terminal amyloid precursor protein (APP) soluble fragment or C-terminal fragment. The beta-amyloid or APP preparations are useful for manufacturing a prophylactic vaccine for a therapeutic, or as a prophylactic vaccine for the prevention, or as a therapeutic for the treatment of a disease associated with beta-amyloid formation and/or aggregation, such as Alzheimer's disease.
           amyloid peptide variant or beta-amyloid N-terminal fragment, or N-terminal amyloid precursor protein (APP) soluble fragment or C-terminal fragment.                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                               The present invention relates to preparations (I) comprising a beta-amyloid peptide variant or beta-amyloid N-terminal fragment, or N-terminal amyloid precursor protein (App) soluble fragment or C-terminal fragment. The beta-amyloid or App preparations are useful for manufacturing a prophylactic vaccine or a therapeutic, or as a prophylactic vaccine for the prevention, or as a therapeutic for the treatment of a disease associated with beta-amyloid formation and/or aggregation, such as Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New beta-amyloid or amyloid precursor protein preparation, useful as a prophylactic vaccine or a therapeutic for preventing or treating a disease associated with beta-amyloid formation and/or aggregation, e.g. Alzhaimer's disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                      amyloid-beta (AB42) peptide (Asp-Ala-Glu-Phe-Arg-His). The peptides of the invention have the capacity to bind to an antibody which is specific for the V-terminal region of the AB42 peptide. The peptides (mimotopes) of the invention are useful in the preparation of a vaccine for Alzheimer's disease. The present amino acid sequence represents the
                                                                                                                                                                                                                                                                                                                                                                                        Use of a compound having a binding capacity to an antibody specific for the natural N-terminal AB42 sequence, for preparing a vaccine for preventing and treating Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention comprises peptides which mimic the N-terminal region of

The present invention relates to antigenic products (A), comprising a dendritic polymer built on a core molecule which is at least difunctional to provide branching and containing up to 16 terminal functional groups to which an antigenic peptide, that comprises an epitope of a depositionaling polypeptide involved in plaque-forming disease, is joined by response against a deposit-forming polypeptide involved in a plaqueforming disease or disorder, e.g. Alzheimer's disease, SAA amyloidosis, hereditary Icelandic syndrome, senility, multiple myeloma, Creutzfeldt-familial insomnia, scrapie or bovine spongiform encephalitis, by administering the antigenic product to a subject in need of it. The present sequence is one such antigenic peptide, which was used to
Antigenic product has dendritic polymer built on core molecule having terminal functional groups to which antigenic peptide that has epitope of deposit-forming polypeptide involved in plaque-forming disease is joined.

The present invention describes an immunising composition (A) comprising:

C(a) an antigenic product (I) which induces an immune response against the

C(a) beta-secretase cleavage site of amyloid precursor protein (APP); and (b)

C(a) a carrier, diluent, excipient, adjuvant or auxiliary. Also described: (I)

C(a) a molecule (II) comprising the antigen-binding part of an antibody (Ab)

C(c) directed against the beta-secretase cleavage site of APP; (2) a single

C(c) directed against the beta-secretase cleavage site of APP; (2) a

C(c) dilamentous bacteriophage (FB) that displays (II), where this is a single

C(c) contropic and neuroprotective activities, and can be used in vaccines or

C(c) neuropic and neuroprotective activities, and can be used in vaccines or

C(c) cresponse against the beta-secretase cleavage of APP and so prevents

C(c) response against the beta-secretase cleavage of APP and so prevents

C(c) response against the beta-secretase cleavage of APP and so prevents

C(c) response against the beta-secretase cleavage of APP and so prevents

C(c) response against the beta-secretase cleavage of APP and so prevents

C(c) response against the antigen-binding part of an Ab directed against the

C(c) cleavage site, or a filamentous phage that displays such an Ab (as a

C(c) cleavage site, or a filamentous phage that displays such an Ab (as a

C(c) cleavage site, on a be used similarly, for passive immunisation.

C(c) the present sequence represents an APP epitope spanning the beta-

C(c) contains the article of a passive immunisation of the excent income.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes an antibody molecule (I) capable of gpecifically recognising two regions of the beta-A4 peptide/Abeta4. The first region comprises the amino acid sequence Ala-Glu-Phe-Arg-His-App. Ser-Gly-Tyr ADA89886 or its fragment, and the second region comprises the amino acid sequence val-His-His-His-Glu-Lys-Leu-Val-Phe-Phe-Ala-Glu-Asp-Val-Glu/Apa98987 or its fragment. Also described: (1) a nucleic acid molecule concoding (1); (2) a vector comprising the nucleic acid of (1); (3) a host cell comprising the vector of (2); (4) preparing (1) comprising the vector of (2); (4) preparing (1); comprising (1); call and recovering (I) from the culture; (5) a composition comprising (I), or an antibody molecule produced by method (4); (6) a kit comprising (I), or an antibody molecule produced by method (4); (6) a kit comprising (I), or an antibody molecule produced by method (4); (6) a kit comprising (I), or selected, optimised clones; (1) preparing a pharmaceutical composition, comprising optimisation of (1), and formulating the composition, comprising optimisation of (1), and formulating the composition, composition prepared by method (8); (1) as expressing cotimised antibody/antibody molecule with a carrier; and (12) a parmaceutical composition prepared by method (8); (1) has to composition prepared by method (8); (1) has composition and/or treatment of a disease associated with corropic and antiparkinsonian activities, and can be composition and/or treatment of a disease associated with a disease mentioned above. The antibody is used for the disease mentioned above. The antibody is used for the disease mentioned above. The antibody is used for the disease mentioned above. The antibody is used for the distince peta-amyloid plaque formation. The antibody with corruction of the disease mentioned above. The antibody is used for the distince beta-amyloid plaque for mention and correction of the disease, herediteral composition for the distince peta-amyloid plaque formation and composition for composition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

                                                                                                                                                                                                                                                                                                                                                       The present invention describes an immunising composition (A) comprising:

(a) an antigenic product (I) which induces an immune response against the beta-secretesse cleavage site of amyloid precursor protein (APP); and (b) a carrier, diluent, excipient, adjuvant or auxiliary. Also described: (1) a molecule (II) comprising the antigen-binding part of an antibody (Ab) directed against the beta-secretesse cleavage site of APP; (2) a clinamentous bacteriophage (FB) that displays (II), where this is a single-chain Ab, on its surface; and (3) a composition containing FB. (A) has nootropic and neuroprotective activities, and can be used in vaccines or passive immunisation. (A) inhibits the cleavage of APP and so prevents the formation of beta-amyloid. (A) can be used to induce an immune response against the beta-secretese cleavage site of APP and so prevents (for treatment and prevention of Alzheimer's disease. The molecule (II) that contains the antigen-binding part of an Ab directed against the cleavage site, or a filamentous phage that displays such an Ab (as a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

The present invention describes an isolated amyloid beta peptide or its homologue which is selected by a method comprising: (a) determining the binding value of each amino acid of a subsequence of amyloid beta peptide upon binding to a HiA class I and/or class II molecule of interest; (b) determining the resulting score of all amino acids of the subsequence, based on the binding value of each amino acids obtained in step (1); and (c) comparing the resulting score to a preselected value. Also described: (c) comparing the reaction of an individual beta peptide and a carrier or diluent; (2) determining T-cell epitopes within amyloid beta peptide; (1) predicting the reaction of an individual can vaccine comprising a beta amyloid or homologue peptide to an individual or waccine comprising a beta amyloid based on the HiA haplotype of the individual; (5) a kit for matching a vaccine comprising anyloid beta epptide has neuroprotective activity, and can be used in anyloid beta peptide has neuroprotective activity, and can be used in the vaccine of preventing the formation or progression of amyloid plaques for preventing the formation or progression of amyloid plaques for preventing or treating Alzheimer's disease. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   8
                                                                                                                                                                                                                                                                                                                                                                              The present invention describes an isolated amyloid beta peptide or its homologue which is selected by a method comprising: (a) determining the binding value of each amino acid of a subsequence of amyloid beta peptide upon binding to a HLA class 1 and/or class II molecule of interest; (b) determining the resulting score of all amino acids of the subsequence, cased on the binding value of each amino acids of the subsequence, comparing the resulting score to a preselected value. Also described: (c) comparing the resulting score to a preselected value. Also described: (d) a vaccine comprising the isolated amyloid beta peptide and a carrier or dilutent; (2) determining T-cell epitopes within amyloid beta peptide; (d) predicting the reaction of an individual to a vaccine; (d) munisation of an individual to a vaccine; (e) munisation of an individual based on the HLA haplotype of the individual; (e) a kit for matching a vaccine comprising amyloid beta peptide has neuroprotective activity, and can be used in vaccines. The amyloid beta peptide has neuroprotective activity, and can be used in vaccines. The amyloid beta peptide is useful for preparing a composition of preventing the formation or progression of amyloid plaques for preventing the formation or progression of amyloid plaques for preventing or treating Alzheimer's disease. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

The present invention describes an isolated amyloid beta peptide or its homologue which is selected by a method comprising: (a) determining the binding value of each amino acid of a subsequence of amyloid beta peptide upon binding to a HiA class 1 and/or class II molecule of interest; (b) determining the resulting score of all amino acids obtained in step (1), and based on the binding value of each amino acids obtained in step (1), and comparing the resulting score to a preselected value. Also described: (c) comparing the resulting score to a preselected value. Also described: (l) a vaccine comprising the isolated amyloid beta peptide and a carrier or diluent; (2) determining T-cell epitopes within amyloid beta peptide: (3) predicting the reaction of an individual to a vaccine; (4) matching a vaccine comprising a beta amyloid or homologue peptide to an individual, (s) a kit for matching a vaccine comprising amyloid beta peptide to an individual based on the HiA haplotype of the individual; (s) a kit for matching a vaccine comprising amyloid beta peptide has neuroprotective activity, and can be used in vaccines. The amyloid beta peptide has neuroprotective activity, and can be used in vaccines. The amyloid beta peptide is useful for preparing a composition and the preventing the formation or progression of amyloid plaques for preventing the formation or progression of amyloid plaques for preventing the formation or progression of amyloid plagues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                           New amyloid beta peptide, useful for preparing a composition for preventing the formation or progression of amyloid plaques for preventing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             for preventing the formation or progression of amyloid plaques for preventing or treating Alzheimer's disease. The present sequence represents an amyloid beta (Abeta) peptide, which is used in an example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New amyloid beta peptide, useful for preparing a composition for

```
homologue which is selected by a method comprising; (a) determining the binding value of each amino acid of a subsequence of amyloid beta peptide upon binding to a HLA class I and/or class II molecule of interest; (b) determining the resulting score of all amino acids of the subsequence, based on the binding value of each amino acids obtained in step (1); and (c) comparing the resulting score to a preselected value. Also described:

(1) a vaccine comprising the isolated amyloid beta peptide and a carrier or diluent; (2) determining T-cell epitopes within amyloid beta peptide;

(3) predicting the reaction of an individual based on the HLA haplotype of the individual; (5) a kit for matching a vaccine comprising a beta amyloid on the HLA haplotype of the individual; (5) a kit for matching a vaccine comprising a period peptide to an individual based on the HLA haplotype of the individual; and (6) preventing the formation or progression of amyloid bases on the substitute. The amyloid beta peptide has neuroprotective activity, and can be used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

The present invention describes an isolated amyloid beta peptide or its homologue which is selected by a method comprising: (a) determining the binding value of each amino acid of a subsequence of amyloid beta peptide upon binding to a HLA class 1 and/or class II molecule of interest; (b) determining the resulting score of all amino acids of the subsequence.

Comparing the resulting score of all amino acids of the subsequence of comparing the resulting score to a preselected value. Also described:

(c) a vaccine comprising the isolated amyloid beta peptide and a carrier or diluent; (2) determining T-cell epitopes within amyloid beta peptide;

(d) predicting the reaction of an individual to a vaccine; (4) matching a vaccine comprising a beta amyloid or homologue peptide to an individual;

(d) predicting the reaction of an individual to a vaccine; (4) matching a vaccine comprising a period or homologue peptide to an individual;

(e) predicting the formatching a vaccine comprising anyloid beta peptide has neuroprotective activity, and can be used in vaccines. The amyloid beta peptide is useful for preparing a composition or progression of amyloid plaques for preventing the formation or progression of amyloid plaques for preventing the formation or progression of amyloid plaques for preventing an amyloid beta (Abeta) peptide, which is used in an example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes an isolated amyloid beta peptide or its homologue which is selected by a method comprising: (a) determining the binding value of each amino acid of a subsequence of amyloid beta peptide upon binding to a HIA class I and/or class II molecule of interest; (b) determining the resulting score of all amino acids of the subsequence,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New amyloid beta peptide, useful for preparing a composition for preventing the formation or progression of amyloid plaques for preventing or treating Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               a peptide; vaccine; immunisation; neuroprotective; disease.

```

vaccine comprising a beta amyloid or homologue peptide to an individual, for immunisation of an individual based on the HLA haplotype of the individual; (5) a kit for matching a vaccine comprising amyloid beta apptide to an individual based on the HLA haplotype of the individual; and (6) preventing the formation or progression of amyloid plaques. The amyloid beta peptide has neuroprotective activity, and can be used in vaccines. The amyloid beta peptide is useful for preparing a composition for preventing the formation or progression of amyloid plaques for preventing or treating Alzheimer's disease. The present sequence represents an amyloid beta (Abeta) peptide, which is used in an example

from the present invention.

The present invention describes an isolated amyloid beta peptide or its homologue which is selected by a method comprising: (a) determining the homologue which is selected by a method comprising: (a) determining the binding value of each amino acids of interest; (b) determining the resulting score of all amino acids of the subsequence, based on the binding value of each amino acids obtained in step (1); and (c) comparing the resulting score to a preselected value. Also described: (c) comparing the resulting score to a preselected value. Also described: (1) a vaccine comprising the isolated amyloid beta peptide and a carrier: (2) determining T-cell epitopes within amyloid beta peptide; (3) predicting the reaction of an individual to a vaccine; (4) matching a vaccine comprising a beta amyloid or homologue peptide to an individual based on the HLA haplorype of the individual; (5) a kit for matching a vaccine comprising amyloid beta individual; peptide to an individual based on the HLA haplorype of the individual; peptide to an individual based on the HLA haplotype of the individual; and (6) preventing the formation or progression of amyloid plaques. The present invention describes an isolated amyloid beta peptide or its homologue which is selected by a method comprising: (a) determining the binding value of each amino acid of a subsequence of amyloid beta peptide upon binding to a HLA class I and/or class II molecule of interest; (b) determining the resulting score of all amino acids of the subsequence, based on the binding value of each amino acids obtained in step (1); and (c) comparing the resulting score to a preselected value. Also described: (l) a vaccine comprising the isolated amyloid beta peptide and a carrier or diluent; (2) determining T-cell epitopes within amyloid beta peptide; (3) predicting the reaction of an individual to a vaccine; (4) matching a

The present invention describes an isolated amyloid beta peptide or its homologue which is selected by a method comprising: (a) determining the binding value of each amino acid of a subsequence of amyloid beta peptide upon binding to a HLA class 1 and/or class II molecule of interest; (b) determining the resulting score of all amino acids of the subsequence, based on the binding value of each amino acids obtained in step (1); and (c) comparing the resulting score to a preselected value. Also described: (1) a vaccine comprising the isolated amyloid beta peptide and a carrier or diluent; (2) determining T-cell epitopes within amyloid beta peptide; (3) predicting the reaction of an individual to a vaccine; (4) matching a vaccine comprising a beta amyloid or homologue peptide to an individual; (5) a kit for matching a vaccine comprising anyloid beta peptide to an individual based on the HLA haplotype of the individual; and (6) preventing the formation or progression of amyloid plaques. The amyloid beta peptide has neuroprotective activity, and can be used in correcting the formation or progression of amyloid plaques for preventing the formation or progression of amyloid plaques for preventing the formation or progression of amyloid plaques for preventing the formation or progression of amyloid plaques for preventing or treating Alzheimer's disease. The present sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New amyloid beta peptide, useful for preparing a composition for preventing the formation or progression of amyloid plaques for preventing
amyloid beta peptide has neuroprotective activity, and can be used in vaccines. The amyloid beta peptide is useful for preparing a composition for preventing the formation or progression of amyloid plaques for preventing or treating Alzheimer's disease. The present sequence represents an amyloid beta (Abeta) peptide, which is used in an example from the present invention.
                                                                                                                                                                                                                                 Gaps

The present invention describes an isolated amyloid beta peptide or its homologue which is selected by a method comprising: (a) determining the binding value of each amino acid of a subsequence of amyloid beta peptide upon binding to a HiA class I and/or class II molecule of interest; (b) determining the resulting score of all amino acids of the subsequence, based on the binding value of each amino acids obtained in step (1); and (c) comparing the resulting score to a preselected value. Also described: (C) comparing the resulting acore to a preselected value. Also described: (C) a vaccine comprising the isolated amyloid beta peptide and a carrier or diluent; (2) determining T-cell epitopes within amyloid beta peptide; (3) predicting the reaction of an individual to a vaccine; (4) matching a vaccine comprising a beta amyloid or homologue peptide to an individual, for a midividual based on the HLA haplotype of the individual; (5) a kit for matching a vaccine comprising amyloid beta peptide has neuroprotective activity, and can be used in amyloid beta peptide has neuroprotective activity, and can be used in the proper of the individual; (c) anyloid beta peptide is useful for preparing a composition of the individual; (c) anyloid beta peptide is useful for preparaing a composition of the individual for preparating the formation of the individual for preparating anyloid beta peptide is useful for preparating anyloid properties.
                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New amyloid beta peptide, useful for preparing a composition for preventing the formation or progression of amyloid plaques for preventing or treating Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             vaccines. The amyloid beta peptide is useful for preparing a composition for preventing the formation or progression of amyloid plaques for preventing or treating Alzheimer's disease. The present sequence represents an amyloid beta (Abeta) peptide, which is used in an example
                                                                                                                     Gaps

The present invention describes an isolated amyloid beta peptide or its chomologue which is selected by a method comprising: (a) determining the homologue which is selected by a method comprising: (a) determining the bonding value of each amino acid of a subsequence of amyloid beta peptide of upon binding to a HLA class I and/or class II molecule of interest; (b) determining the resulting score of all amino acids of the subsequence, based on the binding value of each amino acids obtained in step (1); and (c) comparing the resulting score to a preselected value. Also described: (c) comparing the reaction of an individual to a vaccine comprising the reaction of an individual to a vaccine; (4) matching a vaccine comprising a beta amyloid or homologue peptide to an individual, (c) a kit for matching a vaccine comprising amyloid beta individual based on the HLA haplotype of the individual based on the HLA haplotype of the individual; c peptide to an individual based on the HLA haplotype of the individual; and (6) preventing the formation or progression of amyloid plaques. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New amyloid beta peptide, useful for preparing a composition for preventing the formation or progression of amyloid plaques for preventing or treating Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              and (6) preventing the formation or progression of amyloid plaques. The amyloid beta peptide has neuroprotective activity, and can be used in vaccines. The amyloid beta peptide is useful for preparing a composition for preventing the formation or progression of amyloid plaques for preventing or treating Alzheimer's disease. The present sequence represents an amyloid beta (Abeta) peptide, which is used in an example

The present invention describes an isolated amyloid beta peptide or its homologue which is selected by a method comprising: (a) determining the homologue which is selected by a method comprising: (a) determining the binding value of each amino acid of a subsequence of amyloid beta peptide cupon binding to a Hish class I and/or class II molecule of interest; (b) desenting the resulting score of all amino acids of the subsequence, determining the resulting score to a preselected value. Also described: (c) comparing the resulting score to a preselected value. Also described: (d) a vaccine comprising the isolated amyloid beta peptide and a carrier or diluent; (2) determining T-cell epitopes within amyloid beta peptide; (3) predicting the reaction of an individual pased on the Hish haplotype of the comprising a beta amyloid or homologue peptide to an individual, for matching a vaccine comprising anyloid beta peptide and individual based on the Hish haplotype of the individual; (s) a kit for matching a vaccine comprising anyloid beta and (d) preventing the formation or progression of amyloid plaques. The amyloid beta mayloid beta peptide is useful for preparing a composition comprises. The amyloid beta peptide has neuroprotective activity, and can be used in anyloid beta mayloid beta peptide is useful for preparing a composition of preventing or treating Alzheimer's disease. The present sequence or preventing or treating Alzheimer's disease. The present sequence

The present invention describes an isolated amyloid beta peptide or its homologue which is selected by a method comprising: (a) determining the binding value of each amino acid of a subsequence of amyloid beta peptide upon binding to a HLA class I and/or class II molecule of interest; (b) determining the resulting score of all amino acids of the subsequence, based on the binding value of each amino acids obtained in step (1); and (c) comparing the resulting score to a preselected value. Also described: (c) comparing the resulting score to a preselected value. Also described: (d) a vaccine comprising the isolated amyloid beta peptide and a carrier or diluent; (2) determining T-cell epitopes within amyloid beta peptide; (d) predicting the reaction of an individual to a vaccine; (d) matching a beta amyloid or homologue peptide to an individual, (c) for immunisation of an individual based on the HLA haplotype of the individual; (e) a kit for matching a vaccine comprising amyloid beta peptide has neuroprotective activity, and can be used in anyloid beta peptide has neuroprotective activity, and can be used in the vaccines. The amyloid beta peptide is useful for preparing a composition of preventing or treating Alzheimer's disease. The present sequence or prepresents an amyloid beta (abbeta) peptide, which is used in an example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           amyloid beta peptide, useful for preparing a composition for renting the formation or progression of amyloid plaques for preventing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              amyloid beta peptide; vaccine; immunisation; neuroprotective;
                                                                     amyloid beta peptide; vaccine; immunisation; neuroprotective;
Alzheimer's disease; epitope.
               Amyloid beta homologue K6-1-30-LV/EE epitope SEQ ID NO:122
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    100.0%; Score 24; DB 8; Length 9; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    XXX2X2XXX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes an isolated amyloid beta peptide or its homologue which is selected by a method comprising: (a) determining the binding value of each amino acid of a subsequence of amyloid beta peptide upon binding to a HLA class I and/or class II molecule of interest; (b) determining the resulting score of all amino acids of the subsequence, based on the binding value of each amino acids of the subsequence, c) comparing the resulting score to a preselected value. Also described: (c) comparing the reaction of each amino acids obtained in step (1); and c) determining T-cell epitopes within amyloid beta peptide; or diluent; (2) determining T-cell epitopes within amyloid beta peptide; (3) predicting the reaction of an individual to a vaccine; (4) matching a vaccine comprising a beta amyloid or homologue peptide to an individual, c for immunisation of an individual based on the HLA haplotype of the individual; and (6) preventing the formatching a vaccine comprising amyloid beta peptide has neuroprotective activity, and can be used in vaccines. The amyloid beta peptide is useful for preparing a composition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New amyloid beta peptide, useful for preparing a composition for preventing the formation or progression of amyloid plaques for preventing or treating Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            for preventing the formation or progression of amyloid plaques for preventing or treating Alzheimer's disease. The present sequence represents an amyloid beta (Abeta) peptide, which is used in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ò
                                                                                                                                                                                                                                                                                 The present invention describes an injorate any out the present invention describes an injorate any out the properties of any out the class of a subsequence of amyloid beta peptide upon binding to a HLA class I and/or class II melecule of interest; (b) determining the resulting score of all amino acids of the subsequence, based on the binding value of each amino acids obtained in step (1); and (c) comparing the resulting score to a preselected value. Also described: (1) a vaccine comprising the isolated amyloid beta peptide and a carrier or diluent; (2) determining T-cell epitopes within amyloid beta peptide; (3) predicting the reaction of an individual to a vaccine; (4) matching a vaccine comprising a beta amyloid or nemologue peptide to an individual, for immunisation of an individual based on the HLA haplotype of the individual; (5) a kit for matching a vaccine comprising amyloid beta peptide to an individual based on the HLA haplotype of the individual; (5) a mayloid beta peptide has neuroprotective activity, and can be used in vaccines. The amyloid beta peptide is useful for preparing a composition or progression of amyloid plaques for preventing the formation or progression of amyloid plaques for preventing or treating Alzheimer's disease. The present sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       vaccines. The amyloid beta peptide is useful for preparing a composition for preventing the formation or progression of amyloid plaques for preventing or treating Alzheimer's disease. The present sequence represents an amyloid beta (Abeta) peptide, which is used in an example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        peptide; vaccine; immunisation; neuroprotective;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                        The present invention describes an isolated amyloid beta peptide or its homologue which is selected by a method comprising: (a) determining the binding value of each amino acid of a subsequence of amyloid beta peptide upon binding to a HLA class I and/or class II molecule of interest; (b) determining the resulting score of all amino acids obtained in step (l) and (c) comparing the resulting score to a preselected value. Also described: (l) a vaccine comprising the isolated amyloid beta peptide and a carrier or diluent; (2) determining T-cell epitopes within amyloid beta peptide; (3) predicting the reaction of an individual to a vaccine; (4) matching a vaccine comprising a beta amyloid or homologue peptide to an individual, for immunisation of an individual based on the HLA haplotype of the
                                                                                             New amyloid beta peptide, useful for preparing a composition for preventing the formation or progression of amyloid plaques for preventing
                                                                                                                                                                                                                                                                                                                                         individual; (5) a kit for matching a vaccine comprising amyloid beta and (6) preventing the formation or progression of amyloid plaques. The amyloid beta peptide has neuroprotective activity, and can be used in vaccines. The amyloid beta peptide is useful for preventing the formation or progression of amyloid plaques for preventing the formation or progression of amyloid plaques for preventing an example preventing althemer's disease. The present sequence

The present invention describes an isolated amyloid beta peptide or its homologue which is selected by a method comprising: (a) determining the binding value of each amino acid of a subsequence of amyloid beta peptide upon binding to a HLA class I and/or class II molecule of interest; (b) determining the resulting score of all amino acids of the subsequence, based on the binding value of each amino acids obtained in step (1); and (c) comparing the resulting score to a preselected value. Also described: (1) a vaccine comprising the isolated amyloid beta peptide and a carrier or diluent; (2) determining T-cell epitopes within amyloid beta peptide; (3) predicting the reaction of an individual to a vaccine; (4) matching a vaccine comprising a beta amyloid or homologue peptide to an individual, for individual; (5) a kit for matching a vaccine comprising anyloid beta peptide to an individual based on the HLA haplotype of the individual; and (6) preventing the formation or progression of amyloid plaques. The amyloid beta peptide has neuroprotective activity, and can be used in for preventing the formation or progression of amyloid plaques for preventing or treating Alzheimer's disease. The present sequence represents an amyloid beta (Abeta) peptide, which is used in an example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New amyloid beta peptide, useful for preparing a composition for preventing the formation or progression of amyloid plaques for preventing or treating Alzheimer's disease.
New amyloid beta peptide, useful for preparing a composition for preventing the formation or progression of amyloid plaques for preventing or treating Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ADI35920;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RESULT 98
```

. ;

The present invention describes an isolated amyloid beta peptide or its homologue which is selected by a method comprising: (a) determining the binding value of each amino acid of a subsequence of amyloid beta peptide upon binding to a HLA class I and/or class II molecule of interest; (b) determining the resulting score of all amino acids of the subsequence, based on the binding value of each amino acids obtained in step (1); and (c) comparing the resulting score to a preselected value. Also described: (1) a vaccine comprising the isolated amyloid beta peptide and a carrier or diluent; (2) determining T-cell epitopes within amyloid beta peptide; (3) predicting the reaction of an individual to a vaccine; (4) matching a vaccine comprising a beta amyloid or homologue peptide to an individual, for immunisation of an individual based on the HLA haplotype of the individual; (5) a kit for matching a vaccine comprising amyloid beta peptide to an individual; and (6) preventing the formation or progression of amyloid plaques. The amyloid beta peptide has neuroprotective activity, and can be used in composition of preventing the formation or progression of amyloid plaques for preventing the formation or progression of amyloid plaques for preventing or treating Alzheimer's disease. The present sequence New amyloid beta peptide, useful for preparing a composition for preventing the formation or progression of amyloid plagues for preventing or treating Alzheimer's disease. The present invention describes an isolated amyloid beta peptide or its homologue which is selected by a method comprising: (a) determining the Gaps ö amyloid beta peptide; vaccine; immunisation; neuroprotective; Alzheimer's disease. Length 9; 0; Indels Amyloid beta LV/EE modification peptide SEQ ID NO:33. 100.0%; Score 24; DB 8; I 100.0%; Pred. No. 1.8e+06; iive 0; Mismatches 0; Example 2; SEQ ID NO 33; 69pp; English. or diluent; (2) determining T-cell epitopes within amyloid beta peptide; or diluent; (2) determining T-cell epitopes within amyloid beta peptide; (3) predicting the reaction of an individual to a vaccine; (4) matching a vaccine comprising a beta amyloid or homologue peptide to an individual, for immunisation of an individual based on the HLA haplotype of the individual; (5) a kit for matching a vaccine comprising amyloid beta peptide to an individual based on the HLA haplotype of the individual; comprising to a individual based on the HLA haplotype of the individual; composition to propression of amyloid plaques. The amyloid beta peptide has neuroprotective activity, and can be used in vaccines. The amyloid beta peptide is useful for preparing a composition composition or progression of amyloid plaques for preventing or treating Alzhaimer's disease. The present sequence represents an amyloid beta (Abeta) peptide, which is used in an example from the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GENERAL INFORMATION:
APPLICANT: Jorge GHISO
APPLICANT: Jorge GHISO
APPLICANT: Blas FRANGIONE
TITLE OF INVENTION: New Mutant Genes in Familial British Dementia and Familial Danish
FILE REFERENCE: 32004-16277
CURRENT APPLICATION NUMBER: US/09/579,012
CURRENT FILING DATE: 2000-05-26
PRIOR APPLICATION NUMBER: US 60/136238
PRIOR APPLICATION NUMBER: US 60/136238
RECORDER FILING DATE: 1999-05-26
NUMBER OF SEQ ID NOS: 28
SOFTWARE: Patentin version 3.1
SEQ ID NO 25
